Skills

Python

FastAPI | Django | Flask

Docker | GitHub Actions (CI/CD) |
NGINX

Cloud Deployment (AWS, GCP)

Pytorch | Tensorflow | Numpy

HTML/CSS/Javascript/Typescript

React | Tailwind | NextJS

PostgreSQL | MySQL | MongoDB

Redis | RabbitMQ | Apache Kafka

Languages

English

Amharic

Profile

Senior Full-Stack Python Developer with 4+ years of experience building scalable web apps, production-ready APIs, and AI-powered systems. Skilled across Django, FastAPI, React, and modern cloud infrastructure. Passionate about machine learning, with hands-on experience training, optimizing, and integrating models into real products—from LLM-driven SaaS platforms to real-time applications. Focused on delivering robust engineering and ML solutions that create real user and business impact.

Employment History

Python Developer & DevOps, PartCAD, United States

DEC 2024 – PRESENT

I served as a Python Developer on the PartCAD project. In this role, I contributed to a Python package in Python3.10+, utilizing asyncio to handle concurrent operations crucial for managing complex part relationships and repository synchronization. I applied advanced objectoriented programming principles to model assemblies, parts, and their dependencies in a way that is both extensible and maintainable. I also managed the CI/CD pipelines with GitHub Actions, ensuring seamless builds, automated testing, and consistent deployments as the project evolved.

Junior AI/ML Software Engineer, John Galt Solutions, United States

OCT 2023 – DEC 2024

I worked as an AI/ML Software Engineer, delivering endtoend solutions centered on large language models (LLMs), conversational AI, and retrievalaugmented generation (RAG) workflows to build intelligent, contextaware systems.

Django Developer, Attalos, United States

NOV 2022 – OCT 2023

I worked as a Django Developer on Attalos - a profitability monitoring software for marketplaces. In this role, I maintained backend services using Django, designing scalable models and APIs to efficiently process and aggregate large volumes of order-line data. I implemented business logic to calculate profitability metrics and integrated thirdparty services for cost and marketplace data synchronization.

Backend Engineer, Nexus Technology, Addis Ababa

MAR 2021 – NOV 2022

At the company, I built backend services and APIs across multiple systems using **NestJS, Flask, and Django REST Framework**. I implemented **Kafka-based event workflows** for reliable, high-volume processing and developed secure, scalable service integrations. I also worked on user interaction and content features backed by **PostgreSQL**, and integrated the **OpenAI API** to enable automated content generation and intelligent recommendations.

Education

B.Sc. in Software Engineering (AI Stream), Addis Ababa Institute of Technology

OCT 2019 – JUL 2024

Competitive Programming, Africa to Silicon Valley (A2SV)

DEC 2022 – OCT 2023

Internships

Web Development Intern, Eskalate

FEB 2023 – APR 2023
